

THE ROLE OF INNOVATIVE TECHNOLOGIES IN UZBEKISTAN LANGUAGE LESSONS

Isakov Zakirjon Soliyevich

philology sciences candidate , associate professor of Kokand State University .

Abstract : This in the article modern education technologies education to the field in particular , Uzbek language in teaching importance , modern lessons organization to grow for in the pedagogue to oneself typical information century under the circumstances pedagogical the process effective organization to grow for necessary skills , creative and technological culture from forming Also , the lesson consists of in the process application for different modern pedagogical technology from the methods samples recommendation done .

Key words : pedagogical technologies , modern , interactive , method , education efficiency , “ Comparison method ”, “ Period method , "6x6x6" method .

Abstract: V dannoy state znachenie sovremennyx obrazovatelnyx tekhnologiy v sphere obrazovaniya, osobenno v prepodavanii Uzbekskogo zyzyka, neobhodimyy navykov tvorcheskogo i tvorcheskogo zaklyuchaetsya v formirovanii tekhnologicheskoy kultury. Takje k ispolzovaniyu v hode uroka rekomenduyutsya obraztsy razlichnyx sovremennyx pedagogicheskix tekhnologiy.

Key words: pedagogical technology, modern, interactive method, effectiveness of training, "Comparison method", "Circle method", "6x6x6" method.

Abstract: In this article, the importance of modern educational technologies in the field of education, especially in teaching the Uzbek language, the necessary skills of creativity and creativity lies in the formation of technological culture. Also, samples of various modern pedagogical technologies are recommended for use during the lesson.

Keywords: pedagogical technologies, modern, interactive method, learning efficiency, "Comparison Method", "Circle Method", "6x6x6" method.

Today on the day our society , in general daily our lives public information without tools imagination do We can't . Which industry about let's not talk about this tools us abandonment Especially education in the process information technologies separately relevance profession Computer programs by means of of the youth knowledge and It is widely used to broaden one 's horizons . Various from sciences in teaching modern information technologies current mature , lesson efficiency further Our country is increasing . socio-spiritual of life all in the fields as it is , education also widely in the system comprehensive reforms on the road was put in this education system , higher of education education to the process information technologies take entrance through education quality continuous accordingly improving go , efficiency An increase is required .

Intense education process on time interactive styles , innovative technologies , pedagogical and information technologies training lessons process during to use was aspiration , attention from the day to the day increasing Teacher this in process student's personal improvement , development , knowledge to receive and to be educated environment creates and that's why with one in line management , guidance also performs the function of [4,215]. “ Pedagogical in publications , – writes Professor N. Saidahmedov , – teaching methods active and slow to groups

separation cases exists . If every one method specified or this the goal in solution own in place " If used , it is undoubtedly active " [6,88]. Interactive methods of education are part of the active methods used in their place. Because these methods ensure the application of the principles of a systematic and creative approach to the laws of nature, society, and the development of human thinking. As experience has shown , classes conducted using interactive methods provide students with:

1. Free and independent thinking .
2. Students in the team himself to feel free .
3. Remember to stay to strengthen .
4. Knowledge circle expansion and deepening .
5. Social useful to activity asset to participate .
6. Transaction culture positivity .
7. Oral and writing speech to grow .
8. Own his/her opinion creative , free , meaningful statement to reach ,
9. Own classmates , education providers with in cooperation , in solidarity to work on the road to put educates .

Pedagogical of technologies purpose teacher and student's designated to the goal in cooperation achieve [1.84] . Educational in the process students independent thoughtful , creative work , research , analyze themselves conclusion do if possible , desired goal done increases . Teacher students activity for opportunity and create to receive teaching process basis is counted . Each lesson , topic , study science to oneself typical technology . Today's on the day to us known and wide applicable " Mental " methods attack ", " Cluster ", " VENN diagram ", " BBB", " FSMU" , etc. lesson in the process their own effective the results showing is coming . " Compare method ", " Period method ", such as " 6x6x6" of methods lesson efficiency in providing to oneself typical has a place . In particular , " Comparison from the " method" mother language in science and desired the topic reinforcement for if used It will be . Also , mother language " Speech " from the subject second level " pieces " topic from being studied after students in groups work " Method " based on the topic " I am a complement !" creative text to compose This assignment is assigned . alone in order , small or alone in order , small or big groups also be performed by possible . Subject on the surface text students by presented This method is through students in the team work skills develops , memory strengthened , written or verbal literacy cultivated , creative text create qualification is grown .

Mother tongue in their classes students writing speech and spelling literacy reinforcement for the purpose text create on the surface one how much interesting assignments to give possible . In particular , the " Morphology " section transition in the process every one word series on the surface grammatical fairy tale create task if submitted , students grammatical literacy growth with one in a row , logical under observation to do ability develops , creativity increases [3.45]. Innovation technologies education to the process current education , training efficiency increase for relentless search today's of the day to the need is spinning . New methods education to the process implementation to grow educators in front of standing from issues one is considered .

Innovation technologies education quality and efficiency further improve , educate process to the center student and students training to know activity to increase help gives , education process integrity provides [5,100]. Reader of activity high level indicator , learning activity organization to do , will and of activity student of mind to the subject is rotation . This the goal done increase for , initially , education giver to the goal leading technologies choose knowledge , education educational process integrity to provide necessary . Teacher lesson on time other information presented to do with one in line internet data , multimedia programs , tables and so on to the topic circle additional information showing if it passes , this not only students to class was aspiration increases , maybe students free to study at the required level development , topic opportunity at the level full also help to master Innovative technologies application as a result students free thinking , analysis to make , conclusions release , own the idea statement to

make it , to make it based in a way protection do knowledge , healthy conversation , discussion , debate take to go qualifications improved , formed goes .

Conclusion as in other words , mother language in their classes innovative from technologies from use associate The goal is to help students independent , free to think , to research , to one to the point creative approach , responsibility perception , analysis to do mother language lessons further expansion this on the road innovative technology and from methods use Innovation technologies education to the process current to do , education efficiency further formation for relentless search current of the day to the need is spinning . New technologies education to the process implementation to do educators in front of standing from problems one is considered .
